

THE PRE-ROLL THAT COMES IN GLASS

A hand-blown Jerome Baker tube for the Puff one-gram – the same format, the same wordmark up the side, in a vessel that outlives the joint.

CONCEPT PACK

CALIFORNIA + NEW YORK

AUGUST 2026

THE PREMISE

TWENTY MILLION PRE-ROLLS. TWENTY MILLION PLASTIC TUBES.

Puff has sold more than twenty million pre-rolls. Every one of them went out in a printed plastic tube - the cheapest component in the package, and the only component the customer still has an hour later.

That tube already does the brand's hardest work. It carries the wordmark down its own axis, it sits on the counter, it comes out at the table. It is a brand asset that gets thrown away because of what it is made of - and nothing else about it needs to change.

Make that one part glass and the pre-roll stops being packaging and starts being a keepsake with a joint in it.

20M+

pre-rolls sold, on Puff's own count

THE PIECE · JBD-JT-124

THE JOINT TUBE

A straight, flat-bottomed tube in boro 3.3, blown to take a one-gram king-size cone with room to shake it back out. It stands on a counter, it stops on a table, and it is finished the way a piece of glass is finished rather than the way a component is.

Overall height	124 mm
Body	24 mm OD, 4.5 mm wall
Bore	15 mm – takes a 1 g cone
Base	7 mm, flat and closed
Glass	approx. 79 g, boro 3.3
Closure	tapered natural cork, 24 mm
Decoration	wig wag, drips, JB imprint
Print	50 mm label band, up the axis

TWO MARBLES

Set proud on one side, a few degrees apart. Laid down it beds on both and will not roll off a bench.

WIG WAG

Stringers walked round the base while they are run up and down, stacked into chevrons. Two colours, pulled by hand.

DRIPS

A band of colour laid on at the rim and let go. No two runs are the same, which is the proof a person made it.

Renders are proposals; the hand-blown original stays the reference.

WHY THIS GLASS

NOT A GLASS TUBE. A JEROME BAKER.

Jerome Baker Designs has been blowing glass since the nineties. The name is the point: it is the reason a customer keeps the tube on a shelf instead of in a drawer, and the reason the second one is bought without a joint in it.

Every piece is worked by hand on a torch in New York. The drips run where they run. Two tubes off the same bench are the same object and not the same piece - and that is what a limited drop is actually selling.

HAND BLOWN

Boro 3.3, torch-worked and annealed. No moulds, no injection tooling, no minimum of fifty thousand.

MADE IN NEW YORK

One of the two states Puff already sells in. The glass does not cross a border to get to the New York shelf.

NON PLANT-TOUCHING

The glass ships from the non-cannabis entity, so nothing about the collab touches either licence.

THE SET

THE TUBE IS THE DROP. THE REST IS THE REORDER.

One piece launches a collab. A set keeps it selling after the flower is gone – and Jerome Baker already has the other pieces drawn, modelled and specified.

JOINT TUBE

124 mm · one gram · cork

The hero. Ships with the pre-roll or sells empty.

JBD-JT-124

LIGHTER SLEEVE

58 mm · obround socket

A glass jacket for the lighter everyone already owns. It is struck in the sleeve – 26 mm stands proud.

JBD-LS-58

GLASS TIP

19 mm · screen inside

Reusable filter tip with a slot to start the roll against. Already specified in the programme.

JBD-GT-19

JOINT HOLDER

90 mm · grips any joint

A cigarette holder made for a joint. The bell takes a pinner or a fat one and grips both.

JBD-JH-90

Lighter sleeve · JBD-LS-58

THE BOX

RIGID BOARD, HINGED LID, MAGNETIC CLASP.

A keepsake handed over in a paper bag is a keepsake nobody photographs. The lid is hinged full height and closes onto two disc magnets in the front lip. It opens with a click and closes the same way.

Outside	53 x 48 x 169 mm
Board	3.5 mm rigid, wrapped
Clasp	2 x 9 mm disc magnets
Insert	die-cut foam, one well
Relief	front-cut - lifts straight out

The lining carries the colour. Glass is transmissive, so behind a black insert the piece reads black – the insert is what it is seen against, and it is the one part of the box that is not black.

COLOURWAYS

FOUR WAYS, ONE FORM

Every way is fumed – real silver or gold laid on the hot glass, which is why the colour shifts as the piece turns rather than sitting flat on it. Puff picks one per state, or one per strain.

Mint, silver fume
rod 13 · silver nitrate

Pink, gold fume
rod 3 · gold chloride

Clear, heavy silver
teal accents · wrapped

Clear, heavy gold
magenta accents · wrapped

THE CONSTRAINT

A CORK-STOPPED TUBE IS NOT CHILD-RESISTANT.

California and New York both require cannabis pre-rolls to reach the customer in child-resistant packaging. A glass tube with a cork in it is not that, and no amount of design makes it that. This decides the shape of the programme, so it is on page seven rather than in a footnote.

ROUTE A

Glass inside a CR outer

The loaded tube ships inside a child-resistant carton or pouch. The customer opens the pack, keeps the glass. Highest cost per unit, cleanest story, and the pre-roll is still the thing being bought.

Adds an outer to the BOM. Route to test first.

ROUTE B

Glass sold empty, alongside

The pre-roll ships in Puff's existing compliant pack; the tube is sold as an empty vessel at the same counter, in the same artwork. No packaging approval needed and it can ship to states Puff is not in yet.

Fastest to market. Loses the unboxing.

ROUTE C

CR closure on the glass

A certified push-and-turn closure replacing the cork. Real, and used on glass tubes today - but it is a tooled part, it has to be tested to the standard, and it changes the top of the piece.

Longest lead time. The endgame, not the launch.

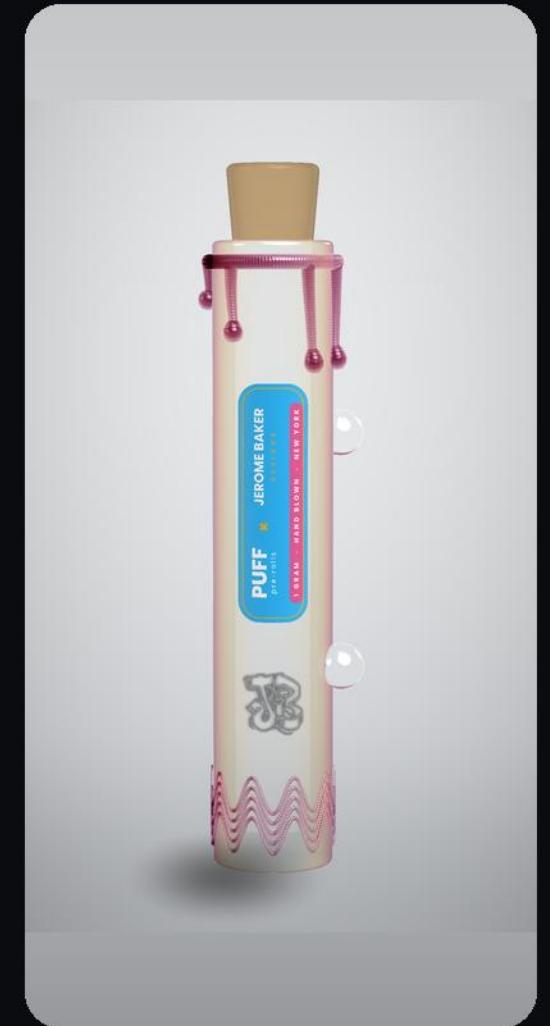

Recommendation: launch on Route B in both states while Route A is packed and tested, and keep Route C on the roadmap. Not legal advice - Puff's own compliance team signs the final pack.

THE DROP

ONE RELEASE, TWO STATES, NUMBERED.

Markets	California and New York
Format	Numbered limited run, per state
Allocation	Split by door count, not evenly
Sell-in	Doors that already carry Puff, first
Window	One drop, then it is gone
Re-order	Empty tubes and the sleeve, ongoing
Budtender	JBD runs a training and rewards programme; Puff's SKU rides on it

Numbering is the whole mechanic: a piece with a number on it is a thing to come back for, and a drop that sells out is a drop the second one is pre-ordered.

HOW THE NUMBER IS BUILT

WHAT MOVES THE PRICE

There is no quote in this pack, because a quote before the final spec is a number that gets renegotiated. What is fixed is what the number is made of, and which levers move it.

GLASS WEIGHT

79 g on the tube as drawn - it is deliberately heavy, to survive a floor. Wall and height are the two sliders that move it, and they move cost linearly.

ANNEAL AND YIELD

Hand-blown glass has a scrap rate. It falls with run length, which is why tier three is not tier one times ten.

CLOSURE

Cork is pennies. A certified CR closure is not, and it is tooled.

DECORATION PASSES

Wig wag, drips, marbles and the pressed mark are four separate trips to the torch. Dropping one is the cheapest saving on the page.

PRINT

One-colour on the band is cheapest; the four-colour lockup as drawn is a second pass.

OUTER

Route A only. Route B has no outer at all.

TIERS TO PRICE AGAINST

Pilot

500 units

one colourway, one state

Drop

2,500 units

two colourways, both states

Programme

10,000 units+

rolling, four ways

Quote against a chosen tier and route, within five working days of spec sign-off.

Figures on this page are illustrative arithmetic, not a quote. Tier volumes are the bands to quote against, not a commitment.

SAY YES TO THE SHAPE OF IT, AND WE SPEC IT.

- 1 Pick a route**
B to launch, A packed behind it
- 2 Pick a way**
one colourway per state, or per strain
- 3 Sign the lockup**
Puff's own artwork replaces the stand-in
- 4 Quote**
against a tier, five working days
