

THE PRE-ROLL THEY KEEP THE BOX FOR

A hand-blown Jerome Baker tube for the Puff one-gram – the wordmark up the side – one holiday drop, in a piece they keep using long after the joint is gone.

CONCEPT PACK

CALIFORNIA + NEW YORK

HOLIDAY 2026

THE IDEA

IT STAYS ON THE SHELF, AND IT STAYS YOURS.

A hand-blown glass tube is not packaging. It is an object somebody chose, and it goes where objects like that go - on a shelf, in a drawer they open every day, out on the table in front of people.

From then on it is where they keep a joint. Any joint: one of yours, one from somewhere else, one they rolled themselves. And every single time they take one out of it, they are holding your name.

You paid for that placement once, at Christmas, and it keeps working all year.

1

piece, kept - not a pack,
opened

365

days it sits somewhere they
look

3-4

drops a year it can carry

THE PIECE · JBD-JT-124

THE JOINT TUBE

Hand-blown, heavy in the hand, and finished the way a piece of glass is finished. It takes a one-gram cone with room to shake it back out, it stands on a counter, and it will not roll off a table.

Overall height	124 mm
Body	24 mm OD, 4.5 mm wall
Bore	15 mm – takes a 1 g cone
Base	7 mm, flat and closed
Glass	approx. 79 g, boro 3.3
Finish	Puff Blue, silver fumed
Closure	tapered natural cork, 24 mm
Print	50 mm label band, up the axis

PUFF BLUE

Your blue in the body, silver fumed so it flashes as the piece turns rather than sitting flat on it.

GOLD DRIPS

A band of gold laid on at the rim and let go. It runs, thins, and beads where it stopped. No two are the same.

PINK AND GOLD WIG WAG

Stringers walked round the base while they are run up and down, stacked into chevrons. Pulled by hand.

WHY THIS GLASS

NOT A GLASS TUBE. A JEROME BAKER.

Jerome Baker Designs has been blowing glass since the nineties. The name is the point: it is the reason a customer keeps the tube on a shelf instead of in a drawer, and the reason the second one is bought without a joint in it.

The drips run where they run. Two tubes off the same bench are the same object and not the same piece - and at twenty thousand units that is not a limitation, it is the only thing plastic cannot copy.

NO TOOLING TO AMORTISE

Injection moulding wants fifty thousand units before the tool pays for itself. Glass has no tool - a ten thousand unit run is a normal run, and the second colourway costs nothing to add.

WORKED, NOT MOULDED

Boro 3.3. The body is formed to spec; the wig wag, the drips, the marbles and the mark are laid on by hand, which is what a mould cannot do at any volume.

NON PLANT-TOUCHING

The glass ships from the non-cannabis entity, so nothing about the collab touches either licence.

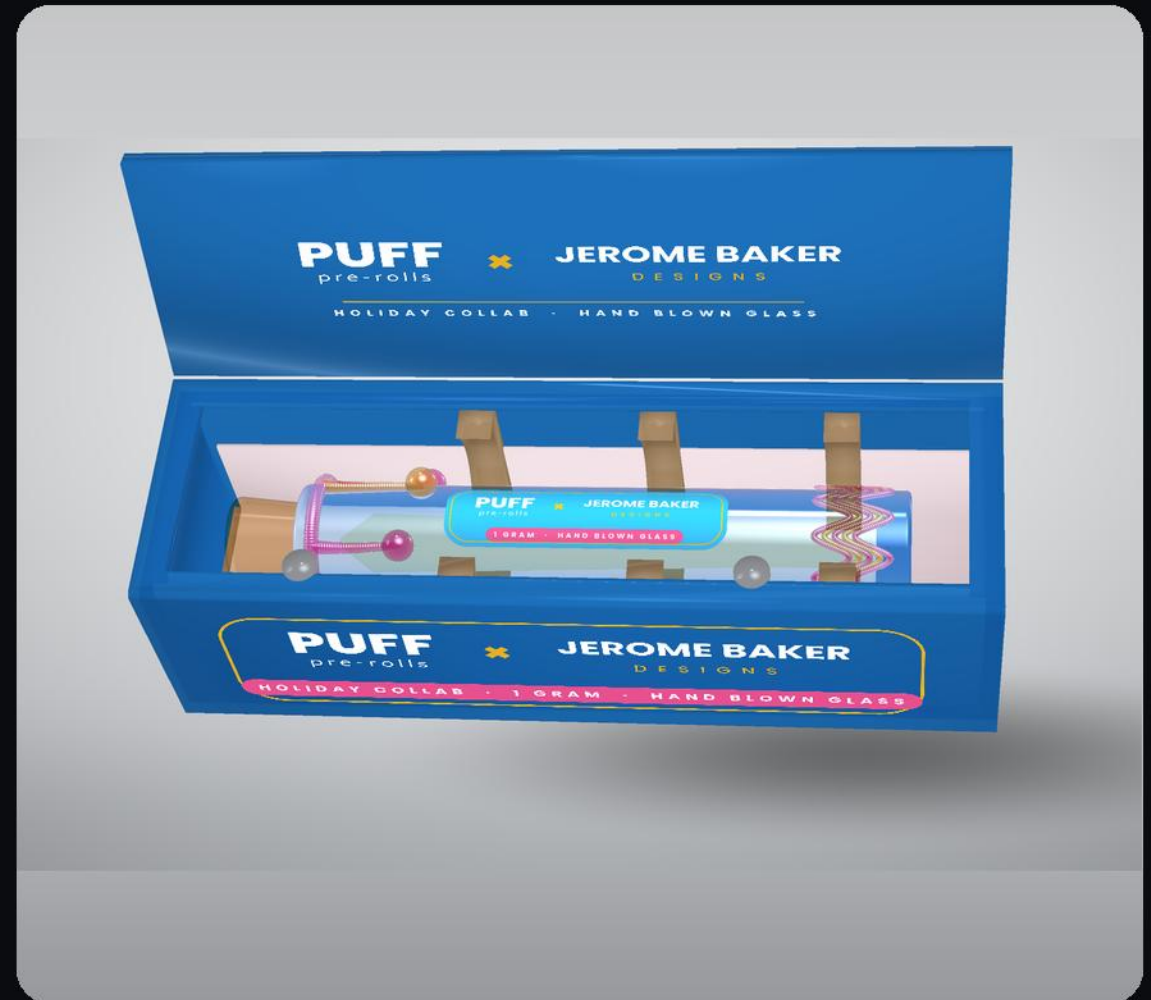

THE BOX

RIGID BOARD, HINGED LID, MAGNETIC CLASP.

The lid is hinged full height and closes onto two disc magnets. It opens with a click, and it is the kind of box people keep things in afterwards rather than flatten and bin.

Outside	53 x 52 x 169 mm
Board	3.5 mm rigid, wrapped
Clasp	2 x 9 mm disc magnets
Insert	die-cut board and tissue
No foam	the insert recycles with the box

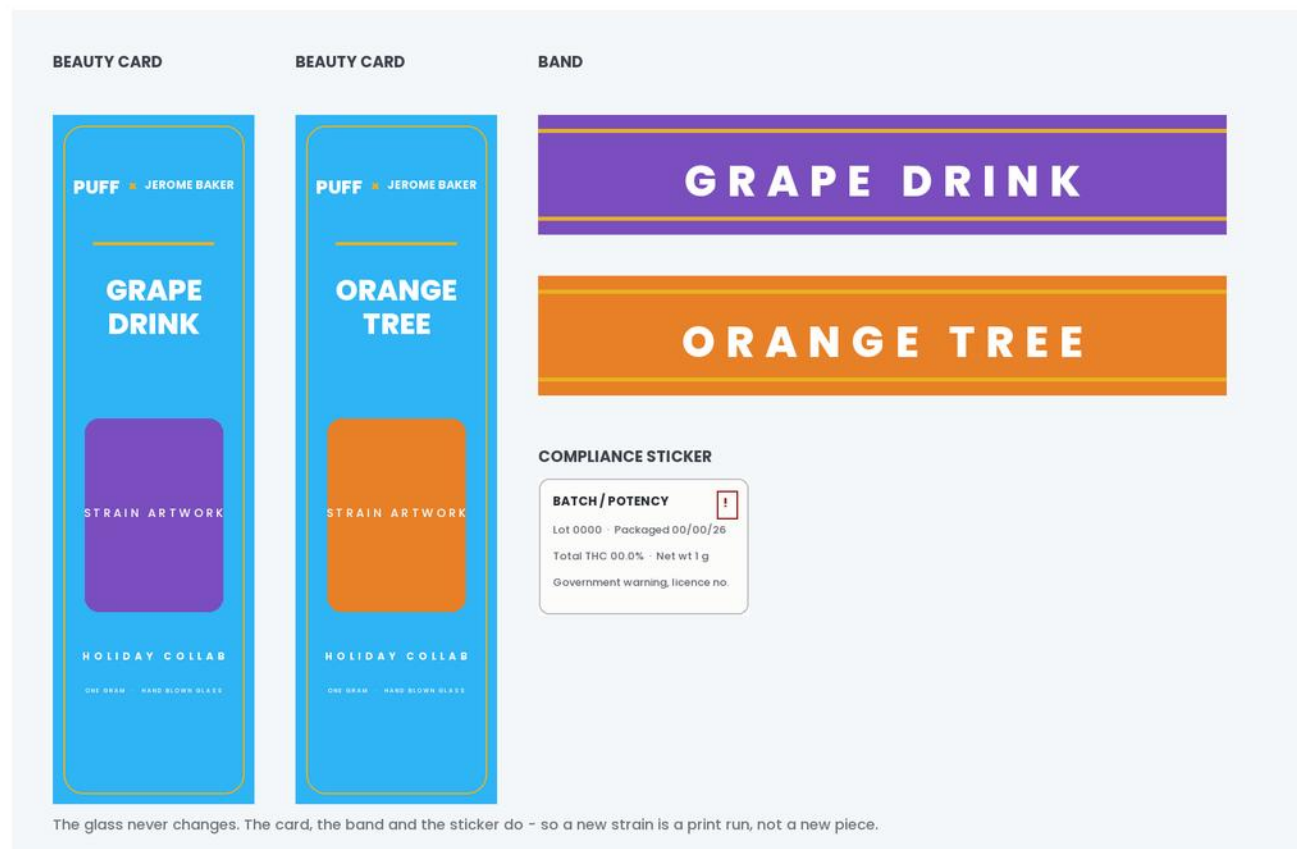

Board ribs and branded tissue instead of foam. Foam is the one part of a box like this that cannot go in the recycling with the rest of it, and a piece sold on lasting should not arrive bedded in the thing that does not.

WHAT CHANGES

ONE PIECE. ANY STRAIN.

The glass is not tied to a strain, and nothing a regulator can move is printed on it. Paper does all of that.

THE BEAUTY CARD

Sits over the piece in the box. Strain, artwork, whatever the drop is called. New card, new drop.

THE BAND

Round the tube, off in one motion. The cheapest thing in the pack to change and the first thing seen.

THE STICKER

Batch, potency, dates, warnings. It goes on last, so nothing a regulator asks for ever touches the glass.

THE DROP

A HOLIDAY DROP, NOT A PACKAGING CHANGE.

When	holiday - on shelf for the gifting weeks
Markets	California and New York
Volume	10,000 units per state - 20,000 in total
The piece	one finish - Puff Blue, silver fumed
Paired with	whatever strain the drop is - it is on the card
Allocation	by door count, into doors that already carry Puff
After it	same piece, new card - a drop a quarter if the first one lands

A limited piece with a strain on it is a reason to come in during gifting week.

Holiday drop

10,000 / state

Strain drops

10,000 / state

A year of it

3 - 4 drops

CAPACITY

CAPACITY IS NOT THE QUESTION

The body and the decoration are two different jobs, and both are already running. Twenty thousand pieces for a holiday window is a normal run – the line is in place, the hand-off pack is drawn, and the date is the only thing left to agree.

THE BODY

Drawn boro tubing, cut to 124, base closed flat at 7 and the rim rolled. Standard tube-shop work – runs in the tens of thousands are routine, and the hand-off pack is already drawn for a factory, in English and in Chinese.

THE DECORATION

Wig wag, drips, two marbles and the pressed mark: four passes by hand on a finished body. A staffed decorating cell does this work already – it is the part nobody can copy, and it is not the part that limits the run.

20,000

units in the drop – both states

1 quarter

from sign-off to delivered

3 weeks

from sign-off to samples in hand

4 a year

the same piece, a new strain each time

One piece and one finish keeps it simple all the way down: one spec on the bench, one label, one SKU on the shelf in both states – and the strain is the only thing that changes next time.

SAY YES TO THE SHAPE OF IT, AND WE SPEC IT.

- 1 Pick the strain**
it prints on the card, not the glass
- 2 Confirm the finish**
Puff Blue, silver fumed
- 3 Sign the lockup**
Puff's own artwork replaces the stand-in
- 4 Samples**
in hand inside three weeks
